SEED ROUND PRESENTATION · 2026

Demo Ledger

Bookkeeping that keeps itself, for Indian small businesses.

ILLUSTRATIVE SAMPLE · FICTIONAL COMPANY

THE PROBLEM

Books are written twice, and late

Retyped by hand

Sales sit in WhatsApp and paper, then an accountant retypes them at month end.

Errors found too late

Mistakes surface at GST filing time, when fixing them is slow and stressful.

No live view

Owners cannot see cash, receivables or profit until the books are closed.

Result: owners decide on old numbers, and accountants spend their time typing.

THE SOLUTION

Capture once. Entries post themselves.

1. Capture

Photo or forward an invoice. Connect the bank account and payment links.

2. Match

Entries are matched to bank lines and flagged when they do not fit.

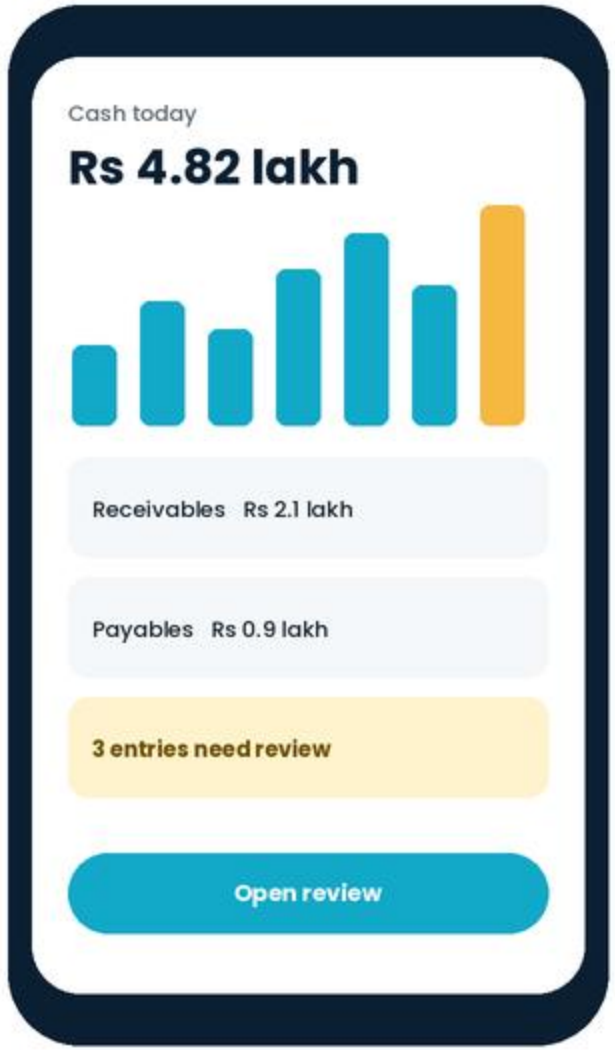

3. Review

The accountant approves exceptions in one screen instead of typing everything.

Owners get a live cash and profit view on their phone. Accountants review exceptions only.

THE PRODUCT

One phone view, one review screen

* Screen shown is an illustrative mock-up.

Capture

Photo or forward an invoice; connect a bank account.

Match

Entries matched to bank lines; mismatches flagged.

Report

GST-ready summaries and a monthly profit view.

Review

The accountant approves in one screen.

WHO WE SERVE

Built for owner-run businesses

Retail

Shops and small chains with daily cash and card sales.

Trading

Wholesalers and distributors with credit and stock.

Services

Agencies and clinics billing monthly.

TARGET CUSTOMER

Annual turnover from Rs 50 lakh to Rs 10 crore

A real deck states how many such businesses exist, with the source. No market figures are shown here because this sample uses no real data.

BUSINESS MODEL

Subscription, billed a year ahead

Rs 60,000
average revenue per customer, year 1

+8% a year
annual price increase

12%
annual churn assumed

Where each Rs 100 of revenue goes

Illustrative split for a mature year. In the sample model, delivery is 25% of revenue and marketing 20%; staff and other costs vary by year, and EBITDA turns positive in year 4.

TRACTION

Early traction (invented numbers)

40

paying customers at start of year 1

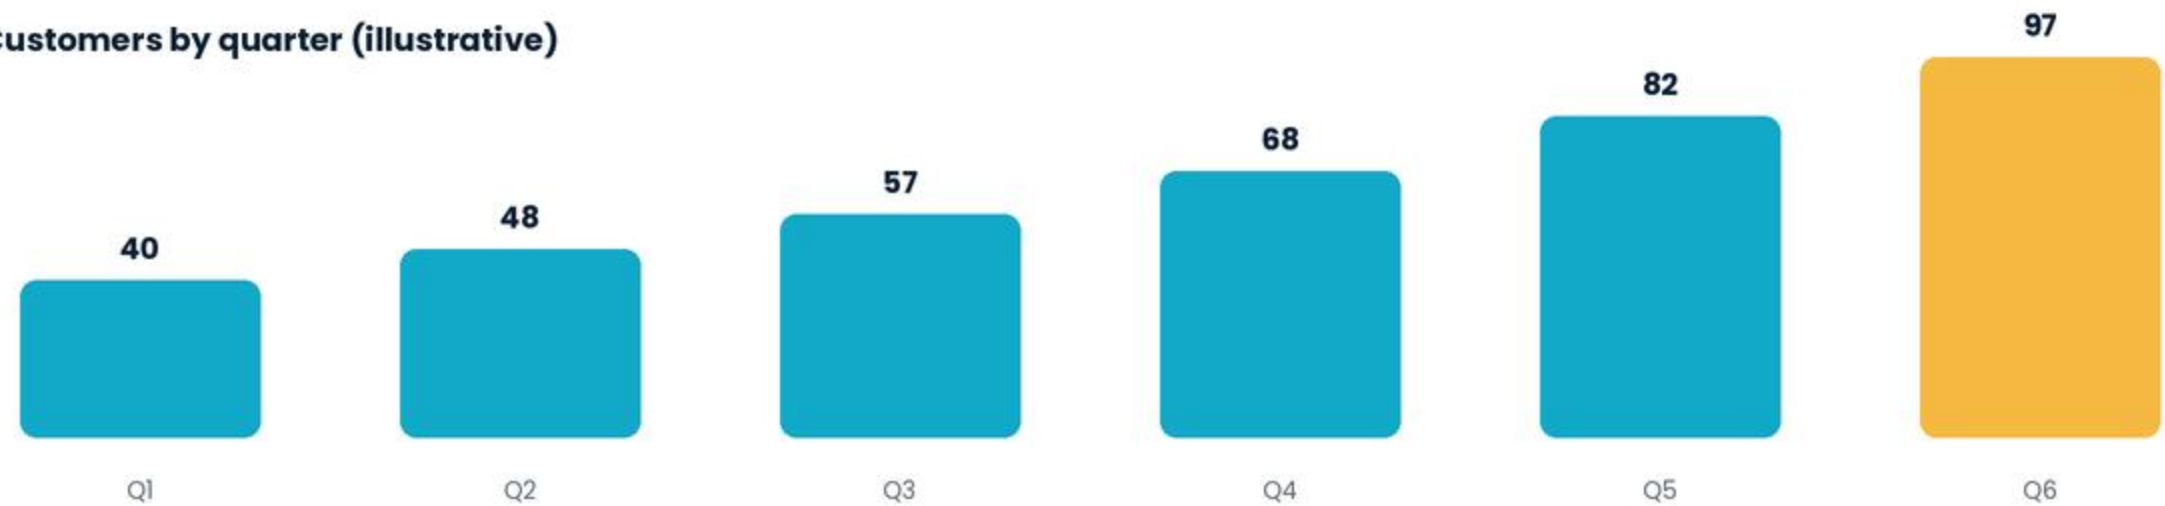

12%

annual churn assumed

Rs 24 lakh

annualised run-rate at start

Customers by quarter (illustrative)

These numbers are fictional and exist only to show how a traction slide reads.

GO TO MARKET

Three channels, one funnel

Accountant partners

Firms bring their small clients onto the platform and review the books.

Content and tools

Free GST guides and calculators attract owners who search for answers.

Inside sales

A small team follows up every trial within a day.

Reach partners + content → **Trial** 14 days free → **Convert** sales follow-up → **Retain** accountant review

COMPETITION

Automatic entry, built for Indian GST

Desktop accounting

Strong features, manual entry.

Generic billing apps

Easy invoicing, weak bookkeeping.

Outsourced books

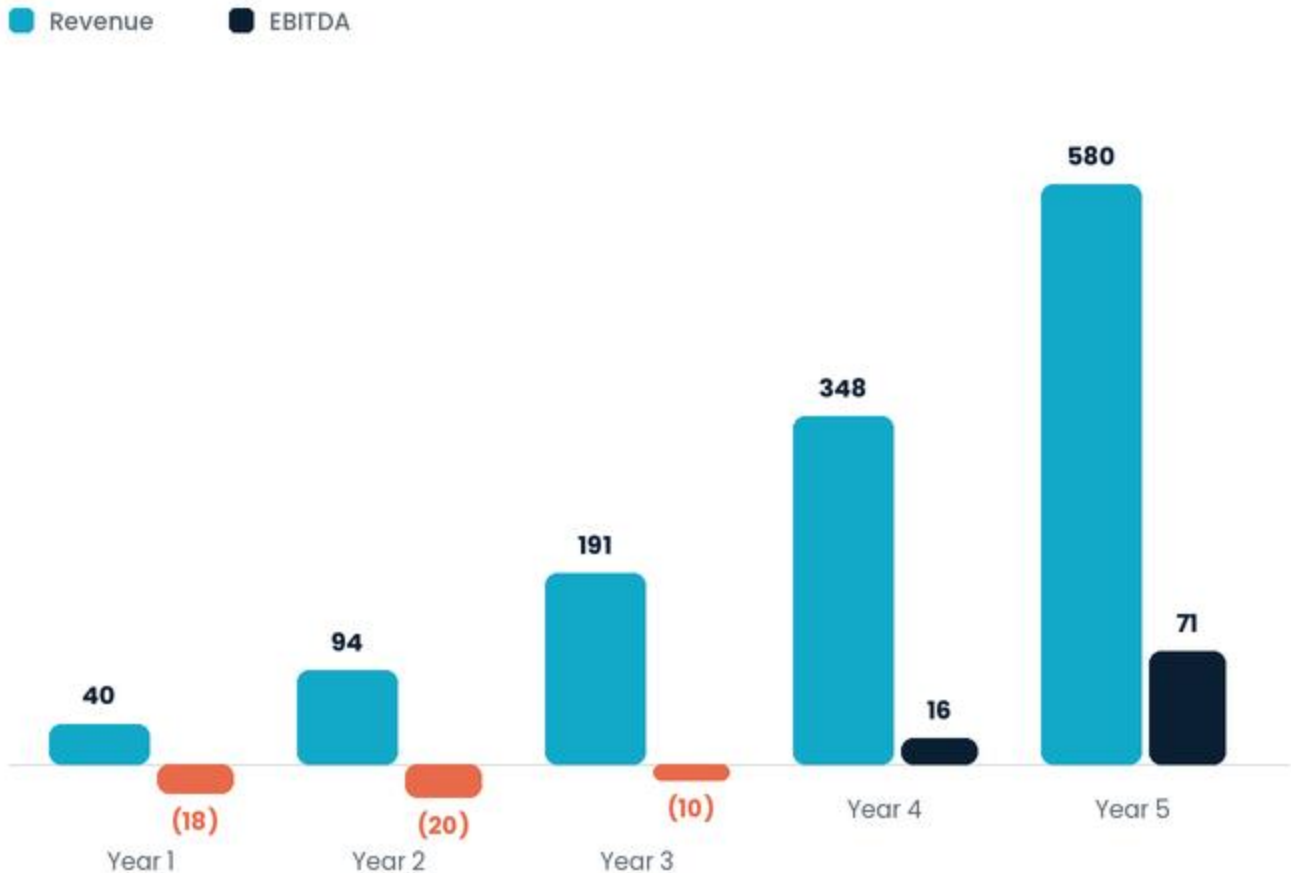

Accurate but slow and not live.

OUR EDGE

Automatic entry plus accountant review, built for Indian GST.

FINANCIAL PLAN

Revenue reaches Rs 580 lakh in year 5

Revenue, year 5

Rs 579.6 lakh

EBITDA, year 5

Rs 70.8 lakh

Customers, year 5

851

First EBITDA-positive year

Year 4

From the sample 5-year financial model (Excel). All numbers are invented.

TEAM (ROLES ONLY)

Roles we are hiring and have in place

F

Founder and CEO

Product and sales

T

CTO

Data extraction and integrations

A

Head of accounting

Rules and review workflow

V

Advisors

A chartered accountant and a SaaS operator (placeholders)

No names or photos are shown because this team is fictional. A real deck shows each person's prior role and relevant experience.

RAISING

The ask

Rs 150 lakh

in equity, to reach EBITDA break-even in year 4 on the sample plan

Use of funds

Product team

Sales and marketing

Operations

Next step: management meeting, data room access and a call with our accountant partners.
